

Notice of intent to make a determination Water Treatment Project – Angle Inlet – Public Comments Invited

September 18, 2019 – Indigenous Services Canada must determine whether the proposed Sachigo Lake First Nation Wastewater Treatment Project, located in Angle Inlet #33 is likely to cause significant adverse environmental effects. To help inform this determination, Indigenous Services Canada is inviting comments from the public respecting that determination.

Written comments must be submitted by October 18, 2019 to:

The Proposed Project

The Northwest Angle 33 First Nation Angle Inlet community requires an upgrade to the Water Treatment System. Two new surface water intake pipes will be installed approximately 219 m into Lake of the Woods and a water reject pipe will be installed approximately 187 m into the lake. A new water treatment plant and below ground reservoir will be constructed to service the community, and new water service piping will be installed throughout the community. The treatment and distribution system will be designed for fire flow capacity to design year 20, based on projected population growth. The treatment system upgrade plan is attached.
